# Science Fair Exhibit Board

Your project must have a project display board that is self-supporting.

The diagram below is a suggested pattern for displaying your information. The parts of the project must flow on your board and have a logical order. The layout should be neat and uncluttered and include only relevant materials. The abstract must be placed in the bottom left hand corner of your display board.

Purpose		Project Title		Materials
Hypothesis		Results		Procedure
Variables		Variables Data/Results Charts/Graphs Drawings/Diagrams Photos (no faces)		Conclusion
Abstract		Space for models, log book, and written report		

All information on the exhibit board should be typed and labeled. The exhibit board should be aesthetically pleasing, which means a good combination of colors should be used, papers should be neatly cut out and attached to the board, among other things.

Remember, the exhibit board is the first part of your project that people are going to see, so it should look good and be reflective of all the work you put into this project.
